A Lake-View Swimming Pool

Spa Space® on a Lake Garda hotel terrace

An adaptable product customizable to client demand, the Spa Space® swimming pool is a perfect way to enhance terraces, penthouses, and gardens, with features that meet every individual project goal and expectations. One excellent example is the Park Hotel Casimiro in San Felice del Benaco, where a pool was installed to make the most of a terrace overlooking Lake Garda. The Spa Space® design team crafted a bespoke pool featuring a 6x2 m water

area, accommodating up to nine guests relaxing on six chaise lounges with Airpool bubbling features, plus a bench. The focus is very much on comfort. The pool features perimeter headrest cushions crafted from durable naval fabric, complemented by external features such as easy-access steps and a bench that doubles as a planter. The ambiance is further enhanced by two efficient RGB LED internal lighting spotlights, creating captivating visuals

that accentuate the pool's appeal late into the evening.

To ensure a cohesive esthetic, technical features such as control and dosing systems are neatly housed in two separate technical compartments integrated into the pool structure. Durability and resistance to the elements are guaranteed through premium materials such as an internal polypropylene shell and external structural polystyrene coating.
