Whether it be a terrace, garden, home or contract space, La Veneta Forme's new Spa Space® mini pool creates an oasis of relaxation in any setting.

The pool's patented, heat-sealed shell is made of high-quality white polypropylene on a high-density, self-extinguishing polystyrene structure. Reinforced with mesh and a cementitious skim coat, this approach ensures resistance to chemical water treatments, bad weather and atmospheric agents. Many size, function, color and furnishing

options are available to cater to architects' and designers' needs. Each project may be customized with water heating, massage loungers and benches, and RGB LED strips installed inside or outside the pool.

In addition to using durable materials, safety has been designed in as an added benefit. The interior may be equipped with non-slip steps; the pool edge is lined with nautical eco-leather cushions that serve as comfortable headrests, ensuring easy and safe access, and a

"soft landing" in the event of an accidental fall.

Spa Space® may be specified with Blue Connect, a smart device that analyzes and automatically provides precise data on water conditions. The Blue Connect app informs users on how to restore the pool water parameters to a state of balance.
